Introduction

Welcome to My Angular Travel App! This document will guide you through the setup, usage, and customization of the app. Our travel app offers a sleek and modern design, integrated booking system, and much more to enhance your travel business.

Getting Started

2.1 Requirements:

- Node.js (v12.11.1 or higher)
- Angular CLI (v13.3.0 or higher)
- npm

2.2 Installation Instructions:

1. **Buy the project:** Buy the project from here

2. Navigate to the project directory: ``cd tms``

3. Install dependencies: ``npm install``

2.3 Folder Structure:

- /src: Source code of the app
- /dist: Production build output
- angular.json: Angular configuration file
- package.json: Project metadata and dependencies

Usage

3.1 Running the App:

1. Start the development server: ``ng serve``
2. Open your browser and navigate to ``http://localhost:4200``

3.2 Building for Production:

1. Create a production build: ``ng build --prod``
2. The output will be in the ``/dist`` folder

3.3 Deployment:

- Follow the hosting provider's instructions for deploying an Angular app. For example, you can use services like Vercel, Netlify, or your own server.

Customization

4.1 Configuration:

- Modify environment variables in ``/src/environments/``.

4.2 Theming:

- Update styles in ``/src/styles.scss``.

4.3 Adding/Removing Features:

- To add a new component: ``ng generate component ComponentName``
- To remove a component, delete its files and references.

Features

- Sleek and Modern Design
- Fully Responsive Layout
- Easy-to-Use Navigation
- Fast Loading Speed
- SEO Optimized Code
- Customizable Templates
- High-Quality Images and Videos

Troubleshooting

- **Issue:** App not starting

Solution: Ensure all dependencies are installed and run ``ng serve`` again.
